

**FOTHLOG**  
CONSULTING LIMITED

## COMPANY PROFILE

Design is the intermediary between information and understanding." -- Hans Hoffman

## Our Journey

Our journey began in May 2005, at a Science and Technology fair. We experimented with the use of technology to enhance learning in Students as well as electronic touring systems(Virtual Tours).

Over the years, what began as a tiny science experiment gained momentum and grew to collaborate with other tech startups to build the first independent wireless university wide intranet in Nigeria in 2007.

We have used technology to deliver outstanding results in broadcast houses, educational facilities, recording studios, movie sets, construction, club houses and restaurants.

The  
function  
of design  
is letting  
design  
function.

- Micha Commeren

## What We Do

### **DESIGN:**

Our team of designers comprise architects, engineers and UX designers. When a client conceives an idea or a project, we conduct researches and then brainstorm on the most effective ways to get it idea delivered from idea to delivery. We believe that design makes ideas accessible. and effective design saves time and cost.

### **IMPLEMENTATION:**

We proceed from design to the finer details of producing what was conceived in the mind of the client. This process is subject to vetting by specialists who are engaged at different levels of implementation.

### **CONSULTANCY:**

Our consultancy ranges from supervising specific aspects of projects for clients, Vetting professionals, Managing Outsourcing, Managing Projects, Cost Consultancy among other services.
